

EXECUTIVE SUMMARY

LAFC has built one of the strongest brands and matchday experiences in MLS. Yet like every sports property, the club faces three ongoing challenges:

- Maintaining fan engagement throughout the full match experience
- Delivering new sponsorship inventory beyond traditional signage and media assets
- Creating incremental revenue opportunities without increasing operational complexity

Onobe has developed a mobile-first live prediction platform designed specifically for sports venues and live event attendees.

The app allows fans attending matches to answer real-time prediction questions, earn points, compete on a live leaderboard, and redeem rewards—all through a simple mobile web experience requiring no app download.

Most importantly, the platform creates a new sponsorship asset that can be sold to partners while enhancing fan engagement during matches.

We propose a 3-5 match pilot program with LAFC to validate engagement, sponsorship interest, and operational execution.

THE FAN EXPERIENCE

The experience is intentionally simple:

Step 1: Join

Fans scan a QR code or visit a mobile web link
No app download required.

Step 2: Predict

Fans answer simple match-related prediction questions throughout the event.

Example questions based on four resolution windows:

1. **Micro (1–3 min):** Who will have more possession in the next 2 minutes?
2. **Short (5–10 min):** Will there be a goal in the next 10 minutes?
3. **Medium (rest of half):** How many total shots on goal by halftime?
4. **Long (full match):** Who wins the match? (LAFC / Opponent / Draw)

Step 3: Win & Redeem

Correct predictions earn points. Fans climb a live leaderboard and redeem points for rewards and experiences. The result is a second-screen engagement experience that complements the live match.

BUSINESS CASE

The platform creates value across multiple areas.

<u>Area</u>	<u>Value</u>
Revenue	New sponsor inventory and activation opportunities
Marketing	Increased fan engagement and first-party data
Operations	Low operational burden with minimal game-day requirements
Technology	Independent platform requiring no integration into existing systems
Partnerships	New measurable sponsor assets and reporting opportunities

REVENUE MODEL

The platform is designed to be sponsor-supported.

Example activation: **"LAFC Matchday Prediction Game Presented By SPONSOR"**

Sponsor benefits:

- High-engagement impressions
- Brand integration within gameplay
- Sponsored prediction questions
- Reward sponsorship opportunities
- Engagement reporting

The objective is to create a new monetizable asset without requiring capital investment from LAFC.

WHY NOW?

MLS clubs continue to seek new ways to deepen fan engagement while increasing sponsorship value.

Prediction gaming has already proven highly effective across sports, fantasy, and sports betting ecosystems because it taps into natural fan behaviors:

- Competition
- Achievement
- Social status
- Match anticipation

The opportunity for LAFC is to become an early adopter of a venue-focused prediction experience before the category becomes commonplace across MLS and other major sports leagues.

PILOT PROPOSAL

PILOT SCOPE: 3-5 LAFC home matches

ONOB RESPONSIBILITIES

- Platform operation
- Question management
- Fan service support
- Reporting and analytics

LAFC RESPONSIBILITIES

- Matchday promotion
- Scoreboard/video board exposure
- Prize support
- Designated point of contact

SUCCESS METRICS

- Fan participation
- Repeat engagement
- Average session activity
- Sponsor interest
- Operational performance

GOAL: Determine feasibility for a full-season deployment and sponsorship program.

NEXT STEPS: Approve a pilot planning session to define match selection, promotional strategy, and success criteria.
